PROFESSIONAL SUMMARY

Unity and C# developer focused on Virtual Reality (VR), Extended Reality (XR) and interactive 3D experiences, currently studying Engineering in Virtual Reality and Digital Game Design. Beta tester on a university VR project for Meta Quest 3, performing functional checks and reporting issues to support validation. Builds independent Unity projects, including a VR physics-interaction prototype and an action roguelite for Android and PC. Seeking Trainee, Junior or internship opportunities in Unity and XR/VR development.

TECHNICAL SKILLS

Engines & Languages: Unity 6, C#, Unreal Engine, Python
VR / XR: Meta Quest 3, VR functional testing, beta testing, issue reporting
Unity Tools: Unity Input System, Universal Render Pipeline (URP), TextMeshPro, NavMesh
Programming: Object-oriented programming (OOP), component-based architecture, events, state machines, debugging
3D Interaction & Physics: Rigidbody, collisions, Raycasting, fundamentals of physical behavior
Gameplay Systems: Player controls, enemy AI, modular systems, progression systems, Object Pooling
Tools: Git, GitHub, Blender

PROJECTS & ACADEMIC EXPERIENCE

PhysicsVR Prototype | VR physics interaction prototype
Personal project · Unity 6, C#, VR hardware · In development

- Developing a personal prototype that explores physical interaction and object manipulation in a virtual reality environment.
- Repository: github.com/Matixvc/PhysicsVR_Prototype

40 Days of Light | Action survival roguelite
Independent project · Unity 6, C#, URP 17.6, Input System · Android / PC

- Top-down game with a 40-day progression, enemy waves and boss encounters.
- Implemented player controls, progression and difficulty systems, modular weapons, game-state management and NavMesh-based enemy AI.
- Applied Object Pooling for enemies, experience gems and effects; set up separate graphics configurations for mobile and PC.
- Repository: github.com/Matixvc/40-DAYS-OF-LIGHT

XR Beta Tester | Confidential university project (NDA)
Unpaid academic collaboration · Meta Quest 3 · Not an employment or contracted position

- Beta-tested a university-developed VR experience directly on Meta Quest 3.
- Performed functional checks, reviewed the experience during use, and reported issues and unexpected behavior to support project validation.

EDUCATION

Engineering in Virtual Reality and Digital Game Design (in progress)
Universidad Bernardo O'Higgins (UBO), Santiago, Chile | 2021 – Present | Expected graduation: 2028

LANGUAGES & AVAILABILITY

Languages: Spanish (native), English (intermediate)
Seeking: Trainee / Junior roles and internships in Unity, VR or XR development
Work arrangement: Remote, hybrid or on-site
